

**For Operating Day: Sunday, April 11, 2021**

The Renewables Watch Report provides key data about renewable energy production within the California ISO grid as the state moves toward a carbon-free system. The information provided is as accurate as can be delivered in a daily format. It is unverified raw data and is not intended to be used as the basis for operational or financial decisions.

In 2021, the data found in the "Daily Renewable Watch" report will be integrated into various areas of Today's Outlook. Details on the migration of the data will be provided in advance of the launch.

### Renewables Production

#### 24-Hour Renewables Production

Renewable Resources	Peak Production Time	Peak Production (MW)	Daily Production (MWh)
Solar Thermal	15:49	426	2,995
Solar	12:32	11,705	99,794
Wind	23:46	5,462	70,251
Small Hydro	19:06	228	3,942
Biogas	4:36	218	5,171
Biomass	8:24	233	5,012
Geothermal	7:32	978	23,138
<b>Total Renewables</b>			<b>210,303</b>

Total 24-Hour System Demand (MWh): 480,316

This table gives numeric values related to the production from the various types of renewable resources for the reporting day. All values are hourly average unless otherwise stated. Peak Production is an average over one minute. The total renewable production in megawatt-hours is compared to the total energy demand for the ISO system for the day.

#### Hourly Average Breakdown of Renewable Resources

This graph shows the production of various types of renewable generation across the day.

System Peak Demand (MW) **25,128**  
\*one minute average  
Time: **20:08**

#### Hourly Average Breakdown of Total Production By Resource Type

This graph depicts the production of various generating resources across the day.

Previous Renewables Watch reports and data are available at <http://www.caiso.com/green/renewableswatch.html>

This table gives numeric values related to the production from the various types of renewable resources for the reporting day. All values are hourly average unless otherwise stated. Peak Production is an average over one minute. The total renewable production in megawatt-hours is compared to the total energy demand for the ISO system for the day. Solar PV and Solar thermal generators that are directly connected to the power grid. "Solar PV" is defined as solar generating units that utilize solar panels containing a photovoltaic material. "Solar Thermal" is defined as solar generating units that convert sunlight into heat and utilize fossil fuel or storage for production which may occur after sunset.

### For Operating Day:

The first graph provided on this page shows how much energy renewable resources are contributing to the grid, and when those resources are producing their daily maximum and how that production correlates to the maximum energy demand.

## Comparison to Load

The information contained in this report is preliminary and subject to change without notice. No inference, decision or conclusion should be made based on the information in this report or any series of these reports. All values are hourly average unless otherwise stated. Questions about this report should be directed to the ISO Service Desk at 916-351-2309 or 888-889-0450.
